

ORION PLUS

THREE-PHASE 30-2000kVA

Standard features

Voltage stabilisation	Independent phase control
PC selectable output voltage*	from 210V to 255V (L-N) from 360V to 440V (L-L)
Output voltage accuracy	±0,5%
Frequency	50Hz ±5% or 60Hz ±5%
Admitted load variation	Up to 100%
Admitted load imbalance	100%
Cooling	Natural ventilation (from 35°C aided with fans)
Ambient temperature	-25/+45°C
Storage temperature	-25/+60°C
Max relative humidity	<95% (non condensing)
Admitted overload	200% 2min.
Harmonic distortion	None introduced
Colour	RAL 7035
Protection degree	IP 21
Instrumentation	Input & Output digital multimeter
Installation	Indoor
Oversvoltage protection	<ul style="list-style-type: none"> • Class II output surge arrestors • Optimal voltage return through supercapacitors in case of black-out

* Output voltage can be adjusted by choosing one of the indicated values.
Such choice sets the new nominal value as a reference for all the stabiliser parameters.

All ORTEA equipments are designed and built in compliance with the Low Voltage and Electromagnetic Compatibility European Directives with regard to the CE marking requirements. ORTEA products are built with suitable quality components and that the manufacturing process is constantly verified in accordance with the Quality Control Plans which the Company applies in compliance with the ISO 9001 Standards. The commitment towards environmental issues and safety at work issues is guaranteed by the certification of the Management System according to the ISO14001 and OHSAS18001 Standards. In order to obtain better performance, the products described in the present document can be altered by the Company at any date and without prior notice. Technical data and descriptions do not hold therefore any contractual value.

Accessories

Interrupting devices

Load protection against over/undervoltage

Manual by-pass line

Total protection kit

Input isolating transformer

Integrated automatic power factor correction system

SPD surge arrestor

EMI/RFI filters

Neutral point reactor

Up to IP55 protection degree for indoor and outdoor installation

Orion stabilisers are available for different ranges of input voltage fluctuation. In the $\pm 15\%$ / $\pm 20\%$ and $\pm 25\%$ / $\pm 30\%$ types, the change of input range is obtained through different internal connections.

The Orion Plus voltage stabilisers regulate the output voltage independently on each phase.

Similarly to the Orion stabilisers, they can supply any single-phase, bi-phase and three-phase load even in case of and up to 100% unbalanced load current and asymmetrical mains distribution.

In this configuration, the presence of the neutral wire is required. The stabiliser can also operate without neutral wire by adding a device able to generate it (D/zn or D /yn isolating transformer or neutral point reactor).

The stabilisers are cooled via natural air ventilation, assisted by extracting fans when the cabinet internal temperature exceeds 35°C .

The instrumentation consists of two multi-task digital line analysers which are able to provide with information regarding the status of the lines upstream and downstream the voltage stabiliser (phase and linked voltages, current, power factor, active power, apparent power, reactive power, etc.).

The operating status of the stabiliser can be monitored by means of the LEDs on the front panel displaying all the information regarding each phase operating mode ('power on'; reaching of voltage regulation limits; increase/decrease of voltage regulation) and the possible alarms (minimum and maximum voltage, maximum current: overtemperature; ventilation failure). The alarm indicators are accompanied by an acoustic alarm.

- Up to 250kVA $\pm 15\%$, the regulation circuit is protected against overload and short circuit on the voltage regulator by an automatic circuit breaker.
- From 300kVA $\pm 15\%$, an electronic voltage regulator protection system activates in case of overload on the voltage regulator. In such condition, the load supply is not interrupted, but the stabiliser output voltage is automatically set to the lower between the mains voltage and the pre-set output voltage. The service continuity is guaranteed, although the voltage is not stabilised. When the overload condition ceases to exist, the stabiliser switches automatically back to regular functioning.

WIDE RANGE

Symmetrical: $\pm 10\%$, $\pm 15\%$, $\pm 20\%$, $\pm 25\%$, $\pm 30\%$ (other on request).

Asymmetrical: $+15\%/-35\%$, $+15\%/-45\%$ (other on request).

Output voltage accuracy: $\pm 0.5\%$.

TECHNOLOGY

Control and stabilisation, performed on the true RMS value, are based on a digital microprocessor operating with a software specifically developed for Ortea.

Parameters and reference voltage can be set via a PC, thus allowing for adjusting the stabiliser to the actual site conditions.

Independent regulation on each phase.

LONG LIFE

Ortea system voltage regulator with rollers (without brushes, which are subject to heavy wear & tear).

Depending on the rating, the voltage regulator could be toroidal or columnar.

PROTECTION

Up to 250kVA $\pm 15\%$: The voltage regulator is protected by a three-phase automatic circuit breaker.

The auxiliary circuit is protected by fuses.

Overvoltage protection: Class II output surge arrestor.

PROTECTION

From 300kVA $\pm 15\%$: The stabiliser is provided of an electronic voltage regulator protection system activates in case of overload on the voltage regulator. In such conditions, the load supply is not interrupted.

The auxiliary circuit is protected by fuses.

Overvoltage protection: Class II output surge arrestor.

PROTECTION

Output voltage reset to the minimum value in case of blackout by means of supercapacitors banks in order to ensure the correct shutdown.

INSTRUMENTATION

Two multi-task digital analyser mounted on the front panel (linked and phase voltage current, frequency, power factor, active power, reactive power, apparent power etc.).

MONITORING

The stabiliser operating mode can be easily monitored by means of the LEDs on the front panel, which provide with information and alarms.

The auxiliary circuits are protected by fuses. The control logic, performed on the true RMS value, is based on DSP microprocessors. The unit parameters and the output voltage reference can be set by using a personal computer, thus allowing for dealing directly in the field with any problems related to voltage stability. All Orion Plus stabilisers are provided with Class II SPD surge arrester.
